

# Air Generator

## Make your analysis easier, simpler and more reliable.

YCM Air Generators produce dry and hydrocarbon-free air ( $\text{NO}_x/\text{SO}_x$  free and  $\text{CO}_2$  free with GT series) by using air from oil free compressors, thus avoid the need to use conventional bottles that are often complex to change.

Operation of the generator requires low levels of air consumption and electrical power. This complete turnkey system is engineered with the highest quality components, is easy to install, and requires only minimal annual maintenance.

With this zero air, you can decrease the background noise level because it gives the baseline much better stability, considerably increasing detector sensitivity and ensuring precise analytical results.

## Benefits

### ● BETTER DETECTOR PERFORMANCE

The reduction of hydrocarbons, including methane, and carbon monoxide to  $< 0.1$  ppm, ( $\text{NO}_x$  to  $< 1$  ppm with GT series) decreases the background noise level and gives the baseline much better stability, considerably increasing detector sensitivity and ensuring precise analytical results.

### ● EASY INSTALLATION

Just connect a suitable oil free compressor (optional) to almost immediately have air at the right grade. To save bench space, the unit can be easily installed on the lab wall.

### ● LAB SAFETY

No more bottles in the lab and expensive pipelines for air distribution.

### ● SAVE MONEY

The unit only requires connection to a suitable oil free compressor and the mains: the investment can be paid back in less than a year.

### ● IMPROVED LAB EFFICIENCY

Continuous operation 24 hours a day cuts dead times for gas bottle changeover and avoids the need for tedious instrument recalibrations.

The following graph shows the difference of the FID signal changes with GC 1500 and without air generator.
